

Paying attention to a problem

I have two prizes — a gold prize, which is something highly desirable, and silver one, which is okay, but much less good. I promise to give you a prize if you say something true (and no prize if you say something false.) It's easy to get a prize: just say something like '2+2=4'. But can you say anything to ensure that the prize you get is the gold one?

1. Pose

1. Pose

2. Dissolve

1. Pose

2. Dissolve

3. Solve
