"Prompt Engineer"
A protocol for approaching your space as if it were generated by AI

I.

Scan your environment for a 'tell': a visual distortion; too many keys on your keyboard; nonsense language; objects that blend into each other; a too-smooth background; weird repetition

II.

Attend to the rest of your space through the lens of this 'tell': you are in a simulated environment that has been generated out of a single written prompt.

III.

Relax your attention. Focus on overall impressions, what you can gather in a glimpse. Begin to retrieve the keywords of the prompt.

IV.

Close your eyes. Reconstruct the prompt that generated you and your environment.
